

Corporate Finance - Course Study Sheet

Course: Corporate Finance Cluster: Business and Economics

Develops valuation, capital budgeting, risk, cost of capital, financing, and working-capital decisions.

Five-module course map

Module	Active evidence to produce
1. time value of money	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
2. bond and stock valuation	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
3. capital budgeting	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
4. risk and return	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
5. capital structure	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.

Reliable learning method

map cash flows and timing, choose discount rate assumptions, calculate value, test sensitivity, and explain strategic constraints

Representative application

Evaluate a project with NPV and scenario analysis while identifying which cash flows are incremental and uncertain.

Weekly study cycle

1. Preview the objective and write two questions. 2. Attend or engage and capture decisions rather than every sentence. 3. Reconstruct the main idea within 24 hours. 4. Complete independent practice. 5. Analyze the first unsupported move on each error. 6. Use feedback. 7. Schedule a delayed mixed recheck.

Self-check before moving on

Can you explain the idea without notes, complete a fresh task, detect a near-miss, verify the result, and state a limitation? Watch especially for: using an attractive return estimate without consistent cash flows, risk-adjusted discounting, sensitivity, and decision context.

What to save

a valuation model with assumptions, cash flows, sensitivity, risk analysis, and recommendation
