

Managerial Accounting - Course Study Sheet

Course: Managerial Accounting Cluster: Business and Economics

Uses cost behavior, allocation, budgeting, variance, and decision analysis for internal management.

Five-module course map

Module	Active evidence to produce
1. cost classification	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
2. cost-volume-profit	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
3. job and process costing	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
4. budgets	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
5. relevant-cost decisions	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.

Reliable learning method

define the decision and time horizon, separate relevant from irrelevant costs, model alternatives, calculate, and test assumptions

Representative application

Evaluate a make-or-buy choice while separating avoidable cost, capacity effects, quality, and strategic risk.

Weekly study cycle

1. Preview the objective and write two questions. 2. Attend or engage and capture decisions rather than every sentence. 3. Reconstruct the main idea within 24 hours. 4. Complete independent practice. 5. Analyze the first unsupported move on each error. 6. Use feedback. 7. Schedule a delayed mixed recheck.

Self-check before moving on

Can you explain the idea without notes, complete a fresh task, detect a near-miss, verify the result, and state a limitation? Watch especially for: including sunk or allocated fixed costs as avoidable without checking whether cash flows actually change.

What to save

a management decision analysis with cost model, assumptions, sensitivity, and recommendation
