

Project Management - Course Study Sheet

Course: Project Management Cluster: Business and Economics

Develops scope, scheduling, resources, risk, stakeholders, quality, change, and project learning.

Five-module course map

Module	Active evidence to produce
1. project scope	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
2. work breakdown and scheduling	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
3. resources and cost	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
4. risk and stakeholders	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.
5. quality and change control	Explain the central idea, complete an application, diagnose one plausible error, and connect it to the next module.

Reliable learning method

define deliverables and acceptance, decompose work, estimate and sequence, assign responsibility, monitor evidence, and manage change

Representative application

Build a schedule with dependencies and explain how one delay affects critical work, resources, risk, and stakeholder communication.

Weekly study cycle

1. Preview the objective and write two questions. 2. Attend or engage and capture decisions rather than every sentence. 3. Reconstruct the main idea within 24 hours. 4. Complete independent practice. 5. Analyze the first unsupported move on each error. 6. Use feedback. 7. Schedule a delayed mixed recheck.

Self-check before moving on

Can you explain the idea without notes, complete a fresh task, detect a near-miss, verify the result, and state a limitation? Watch especially for: treating a task list as a plan without deliverables, dependencies, owners, estimates, risks, and change rules.

What to save

a project plan with scope, schedule, responsibility, risk register, communication, and closeout
